

Fleet safety

Improve your safety record
and your bottom-line.

Go from reactive to proactive with Geotab. Detailed fleet insights empower you to take informed action to improve driving habits and reduce collisions.

- + In-vehicle driver coaching
- + Dash cameras
- + Collision notifications
- + Risk management reports
- + Rules and alerts for aggressive driving

Create a safety-first culture

Safeguard your fleet with dash cams

Get a clear view of events with a range of fleet dash cam options from the Geotab Marketplace, from basic to AI-powered cameras, all fully integrated with Geotab's open fleet telematics platform. Record high-resolution images and video clips in the event of collisions or insurance disputes. Review high definition footage and save video clips for later use as a valuable training resource for your drivers.

Identify risky driving

Proactively monitor driving behavior and identify where coaching is needed with the driver safety scorecard. Monitor speeding, aggressive driving and seat belt usage, and customize the rules to your specific fleet policy.

Coach your drivers in real-time

With the Geotab GO device, you can provide feedback to drivers the moment that they deviate from company safety policies, to improve driving immediately. Create custom rules and get instant notifications when violations occur so that you can cut out any risky behavior before it becomes a habit. Go one step further with GO TALK, which delivers spoken feedback to drivers in real-time.

Get instant collision notifications

Receive an alert the moment a collision is detected. View detailed forensic data before a suspected collision to help you reconstruct the event and establish exactly what happened. And if one of your vehicles was hit while parked, Geotab's GO device will record the incident to help prove no-fault to your insurance provider.
