Switch to Geotab and Save!

- **Make the switch and get 6 months free service**

- Are you affected by the upcoming 3G/CDMA shutdown?
- Looking for a better alternative to your current provider?
- What are your plans to handle this transition?
- Have you looked at other technologies such as Geotab as an alternative to your current vendor?
- What are some of your pain points with your current telematics service provider?

How is Geotab different

- **Innovation:** Geotab invests in our technology with over 700 employees in a technical capacity. Geotab puts out new firmware releases and software updates quarterly. We spend over 20% of our annual revenue in R&D and this continued innovation has been the driving force behind Geotab's growth. Geotab constantly innovates its product with a large team of specialized technical engineers. We also focus and invest in data analytics and electric vehicle technology.
- **Privately owned:** Geotab is owned by employees in the business. This allows us to make strategic investments in technology that drive our customers forward.
- **Open Software Development Kit:** Geotab's software development kit is open to our customers. This allows customers to pull data into their back-office system or share with partners with no interaction from Geotab. This is unique as other telematic providers will restrict access to data or the ability to share. Geotab's SDK allows you to create phone and tablet apps, integrate third-party software, create MyGeotab Add-Ins, complex custom reports and more.
- **Growth during uncertain times:** Through the COVID-19 pandemic, Geotab has shown continued growth and has remained financially strong.
- **Strong record of growth:** Geotab is the largest telematics company in the world with over 2.1 million subscribers. We are present in all seven continents and in over 120 countries worldwide and growing.

- **Leaders in the industry:** Ranked as the [leading telematics provider](#) for the second consecutive year by ABI Research.
- **Cost effective and reliable hardware:** Geotab's GO devices are extremely cost effective. The devices, which are engineered entirely by Geotab have a very low failure rate compared to industry averages.
- **Marketplace ecosystem:** We offer one of the world's largest third-party integrated solutions for Heavy fleets with 200+ integrated solutions.
- **Simplicity:** No need to manage multiple devices for your vehicles, the same device works with vehicles from Class 1 through Class 8.
- **Enterprise level compliance:** Over a 100+ customizable HOS rule sets including the new 7/3 sleeper berth split, easily accessible via the Geotab Drive App.
