Connect and automate

Simplify with software integration

Integrate valuable telematics data into your other business software systems such as fleet rule exceptions, GPS data and vehicle information. Gain greater insight to support company goals and decision-making.
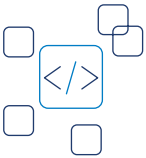

Synchronize in real-time

Use lightweight data feed APIs to actively pull fleet data into your environment and synchronize it with other applications. Easily retrieve active and calculated data, including fault data and exception events.
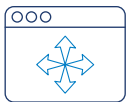

Bring new tech to your team

From video cameras to wireless asset trackers, integrate third-party hardware solutions from the Geotab Marketplace to meet your business goals. Our extensive and growing ecosystem is built to help your business thrive. You can also connect additional hardware to the Geotab GO device with Geotab IOX technology.

Develop custom applications and Geotab Add-Ins

Extend your Geotab experience with custom applications for your business needs. Developers can get started quickly with featured sample code and projects from the Geotab SDKs. Increase functionality by creating custom Add-In buttons or pages, joining MyGeotab data with your own APIs.

MyGeotab SDK benefits

+ Programming language and platform agnostic
+ Paramount security standards
+ Open source content available on GitHub
+ Rate and result limits are in place to maintain system stability
+ Use various methods to pull, push, edit or remove data
+ Find great ideas and guidance within the Geotab Community
